Git-LFS workflow

Remote git repository (Server)

.git/objects
files under native git controle

- txt-1
- txt-2
......
- blob-1

lfs_storage_path
files under git-LFS controle

$git commit -am 'blob-1 added to lfs'

$git lfs track blob-1
$git add blob-1

external file system

- blob-2
- blob-3
- blob-4
......

$git fetch (complete repo)

$git lfs fetch (only needed lfs files)

Local git repository-1

.git/objects
files under native git controle

- txt-1
- txt-2
......
- blob-1

.git/lfs
files under git-LFS controle

- blob-2
- blob-3
- blob-4
......

$git checkout

$git lfs checkout

working directory

- blob-2
- blob-3
- blob-4
......

Local git repository-2

.git/objects
files under native git controle

- txt-1
- txt-2
......
- blob-1

.git/lfs
files under git-LFS controle

- blob-2
- blob-3
- blob-4
......

working directory

- blob-2
- blob-3
- blob-4
......
